

Brasilia workshops

PlanSinn was tasked with organising and holding workshops on the topic "Smart City" as part of a four-week training course in "Public management for competitive and innovative cities" organised by the FH Kreams University of Applied Sciences for young government officials from the district of Brasilia. Whole-day sessions on "Urban Planning for Smart Cities", "Transport Systems and e-Mobility" and "Energy Efficiency and Buildings" were held for 125 participants in the spring and autumn. Incorporating field trips, expert talks and presentations, the workshops presented the state of the art in the respective fields.
