

AALmobi - mobility service for people living in sheltered housing

A participative process was organised to develop a mobility service that helps elderly people to manage daily life independently for as long as possible.

The NGO Caritas Wien runs Oase22, a sheltered housing scheme comprising 40 dwellings in Donaustadt, Vienna's 22nd district. PlanSinn worked together with a team of software and interface programmers, Oase 22 residents and Caritas representatives to develop an intuitive neighbourhood- and generation-specific mobility app. PlanSinn carried out the stakeholder analysis, ran workshops and organised the user participation.

2015 - 2016
